## Key Findings

- From 2006 to 2015 there were 1,313 people of all ages killed in school-transportation-related crashes-an average of 131 fatalities per year.
- From 2006 to 2015 there were 301 school-age children killed in school-transportation-related crashes: 54 were occupants of school transportation vehicles, 137 were occupants of other vehicles, 102 were pedestrians, and 8 were pedalcyclists.
- More school-age pedestrians were killed from 6 to 7 a.m., 7 to 8 a.m. and from 3 to 4 p.m. than any other hours of the day.
- Thirty-five ( $34 \%$ ) of the school-age pedestrians killed in school-transpor-tation-related crashes from 2006 to 2015 were 8 to 13 years old.
- Nearly two-thirds ( $64 \%$ ) of the school-age pedestrians fatally injured in school-transportation-related crashes were struck by school buses or vehicles functioning as school buses (2006 to 2015).
- Among school-age child occupants killed in school-transportation-related crashes, almost three times more died in other vehicles (137), than in school transportation vehicles (54).
- Among the 113 occupants killed in school transportation vehicles, 49 were drivers and 64 were passengers.
- Impacts to the front of school transportation vehicles occurred in 45 percent of fatal school-transportationrelated crashes.

## School-Transportation-Related Crashes

A school-transportation-related crash is a crash that involves, either directly or indirectly, a school bus body vehicle, or a non-school bus functioning as a school bus, transporting children to or from school or school-related activities. In this factsheet "school-age" children are defined as children 18 and younger.

This factsheet includes 10 years of data, from 2006 to 2015. Information on school-transportationrelated crashes is presented as follows.

- Overview
- Person Type
- Age Group
- School Bus Occupant Fatalities by Impact Point and Crash Type
- School Age Fatalities by Time of Day
- School Bus Occupant Fatalities
- Vehicle Maneuver and Pedestrian Fatalities

This fact sheet contains information on motor vehicle fatalities and fatal crashes, based on data from the Fatality Analysis Reporting System (FARS). FARS is a census of fatal crashes in the 50 States, the District of Columbia, and Puerto Rico (although Puerto Rico data is not included in this factsheet).

## Overview

From 2006 to 2015 there were 324,710 fatal motor vehicle traffic crashes. Of those crashes, 1,172 $(0.4 \%)$ were classified as school-transportation-related.
Between 2006 and 2015, there have been 1,313 people killed in school-transportation-related crashes-an average of 131 fatalities per year. Occupants of school transportation vehicles accounted for 9 percent of the fatalities, and nonoccupants (pedestrians, bicyclists, etc.) accounted for 20 percent of the fatalities. Most ( $72 \%$ ) of the people who lost their lives in these crashes were occupants of other vehicles involved (Table 1).

From 2006 to 2015, 102 school-age pedestrians ( 18 and younger) have died in school-transportationrelated crashes. Sixty-one percent were struck by school buses, 3 percent by vehicles functioning as school buses, and 36 percent by other vehicles (passenger cars, light trucks and vans, large trucks, and motorcycles, etc.) involved in the crashes.

## Person Type

Table 1 shows fatalities by person type in school-transportation-related crashes (2006-2015). Among the 113 occupants killed in school transportation vehicles, 49 were drivers and 64 were passengers. Among the 218 pedestrians killed in school-transportation-related crashes, 167 were struck by school vehicles and 50 were struck by other vehicles.
From 2006 to 2015, three drivers and four passengers have died in school bus body vehicles providing transportation for purposes other than school-or school-related activities (churches, civic organizations, etc.).

*Includes school bus body type and non-school bus used as school bus.
**Includes 1 pedestrian fatality in which the striking vehicle was not identified.

## Age Group

From 2006 to 2015, there were 301 school-age children who died in school-transportation-related crashes: 54 were occupants of school transportation vehicles, 137 were occupants of other vehicles, 102 were pedestrians, and 8 were pedalcyclists.

Figure 1 presents the total number of school bus occupant and pedestrian fatalities in school-transportation-related crashes by age group between 2006 and 2015. Among all school-age pedestrians killed in school-transportation-related crashes, 34 (33\%) were 5 to 7 years old and 35 (34\%) were 8 to 13 years old.

Source: Fatality Analysis Reporting System (FARS) 2006-2014 Final File, 2015 Annual Report File (ARF).
Note: Occupant fatalities shown are for occupants of school buses and non-school buses used as school buses.

On average, 7 school-age pedestrians killed were struck by school transportation vehicles (school buses and non-school-bus vehicles
used as school buses) each year, and 4 by other vehicles involved in school-bus-related crashes.

## School Age Fatalities by Time of Day

Table 2 provides school-age (18 and younger) fatalities in school-transportation-related crashes by time of day. Among the 301 school-age fatalities between 2006 and 2015, more school-age pedestrians were killed from 6 to 7 a.m., 7 to 8 a.m., and from 3
to $4 \mathrm{p} . \mathrm{m}$. than any other hours of the day. There were almost three times more fatalities among occupants of other vehicles (137) than occupants of school transportation vehicles (54).

## School Bus Occupant Fatalities by Impact Point and Crash Type

Table 3 shows the total number of school bus occupant fatalities in school-transportation-related crashes by initial impact point on the school transportation vehicle. There were 88 crashes in which at least one occupant of a school transportation vehicle died. Sixty-one percent of those crashes (54) involved at least one other
vehicle. Impacts to the front of the school transportation vehicle occurred in 45 percent of fatal school-transportation-related crashes and impacts to the right side of the school transportation vehicle occurred in 13 percent.

## School Bus Occupant Fatalities

Table 4 provides the information on school-transportation-related crashes involving school bus occupant fatalities. In the 34 single-vehicle crashes, 38 occupants-18 drivers and 20 passengers-were killed. In the 54 multiple-vehicle crashes, 31 drivers and 44 passengers died in the school buses. In the 34 single-vehicle crashes, the first harmful events were as follows: striking a fixed object ( 20 crashes), the vehicle overturning ( 6 crashes), a person falling from the vehicle ( 7 crashes), and 1 other crash.

## Vehicle Maneuver and Pedestrian Fatalities

Table 5 presents the number of school-age pedestrians killed in school-transportation-related crashes by vehicle maneuver and vehicle type. From 2006 to 2015 almost two-thirds (64\%) of the school-age pedestrians fatally injured in crashes were struck by school buses or vehicles functioning as school buses, while 36
percent were struck by vehicles of other body types. Of school-age pedestrians fatally injured in school-transportation-related crashes, 32 percent were struck by school buses or vehicles functioning as school buses that were going straight.
